•••

Using PyCharm with Anaconda for this course.

First install PyCharm Community Edition following the instructions here.. You will get a choice of the free Community Edition at the final download step.

Then we either go to `File -> Settings` (might be called preferences on MacOS), not entirely sure. Or just click the settings icon if you have the tool bar enabled:

preferences

The settings window will appear, just search `Project (Name) -> Project Interpreter`

Make sure it says Python 3.5.2 or above (Anaconda directory), if it doesn't you can search it from the list below.
